

1 We claim:

2

3 1. A method for transmitting video signals via a video
4 transmission system comprising the steps of:

5 receiving said video signals from a non-networked video

6 origination device;

7 transmitting said video signals to one or more video

8 receiving devices via a network; and

9 wherein said video origination device does not require

10 hardware or software modifications to be compatible

11 with said video transmission system.

12

13 2. A method according to claim 1, wherein said video

14 receiving device is selected from the group consisting of a

15 standalone computer, a networked computer, a standalone device

16 having a processor, a networked device having a processor, a

17 networked client device of said video transmission system, and

18 a non-networked client device of said video transmission

19 system.

20

21 3. A method according to claim 1, wherein said network is

22 selected from the group consisting of the Internet, a local

23 area network, a wide area network, and a wireless network.

1

2 4. A method according to claim 1, wherein the operating
3 systems of said video origination device and said video
4 receiving devices comprises more than one type of operating
5 system.

6

7 5. A method according to claim 1, further comprising the
8 step of:

9 authenticating the identity of said video receiving
10 device; and
11 authorizing said video receiving device to receive said
12 video signals.

13

14 6. A method according to claim 1, further comprising the
15 step of:

16 displaying said video signals on a video display unit
17 coupled to said video receiving device.

18

19 7. A method according to claim 1, further comprising the
20 step of:

21 converting said video signals from analog to digital.

22

1 8. A method according to claim 1, further comprising the
2 step of:

3 filtering said video signals.
4

5 9. A method according to claim 1, further comprising the
6 step of:

7 compressing said video signals.
8

9 10. A method according to claim 1, further comprising the
10 step of:

11 decompressing said video signals.
12

13 11. A method according to claim 1, further comprising the
14 step of:

15 recording said video signals;

16 wherein said recorded video signals may be played back

17 subsequent to said recording.
18

19 12. A method according to claim 1, wherein said transmitting
20 comprises one of the group consisting of multicasting and
21 broadcasting.
22

1 13. A method for transmitting video signals via a video
2 transmission system comprising the steps of:
3 receiving said video signals from a video origination
4 device;
5 transmitting said video signals to at least one non-
6 networked video receiving device; and
7 transmitting said video signals to at least one networked
8 video receiving device.

9
10 14. A method according to claim 13, wherein said video
11 origination device does not require hardware or software
12 modifications to be compatible with said video transmission
13 system.

14
15 15. A method according to claim 13, wherein said video
16 receiving device is selected from the group consisting of a
17 computer, a device having a processor, and a client device of
18 said video transmission system.

19
20 16. A method according to claim 13, wherein said network is
21 selected from the group consisting of the Internet, a local
22 area network, a wide area network, and a wireless network.

23

1 17. A method according to claim 13, further comprising the
2 step of:

3 displaying said video signals on a video display unit
4 coupled to said video receiving device.

5

6 18. A method according to claim 13, further comprising the
7 step of:

8 converting said video signals from analog to digital.

9

10 19. A method according to claim 13, further comprising the
11 step of:

12 filtering said video signals.

13

14 20. A method according to claim 13, further comprising the
15 step of:

16 compressing said video signals.
